## PRODUCT OVERVIEW

Our Glucosamine Chondroitin MSM supplements are a perfect way to reduce inflammation of your joints, cartilage, and tendons, while strengthening your connective tissue. A potent combination of Glucosamine and Chondroitin, both chemicals found in cartilage and the fluids surrounding your joints, come together to ease pain and irritation, making it an ideal supplement to aid symptoms of osteoarthritis. Maintain your mobility with Chosen Vitamins Platinum Series Glucosamine Chondroitin MSM Supplements.

## HOW DOES IT WORK?

Glucosamine sulfate is a chemical found in the human body. It is used by the body to produce a variety of others chemicals that are involved in building tendons, ligaments, cartilage and the thick fluid that surrounds joints.

Joints are cushioned by the fluid and cartilage that surround them. In some people with osteoarthritis, the cartilage breaks down and becomes thin. This results in more joint friction, pain and stiffness. Researchers think that taking glucosamine supplements may either increase the cartilage and fluid surrounding joint or help prevent breakdown of these substances, or maybe both.

Some researchers think the "sulfate" part of glucosamine sulfate is also important. Sulfate is needed by the body to produce cartilage. This is one reason why researchers believe that glucosamine sulfate might work better than other forms of glucosamine such as glucosamine.
